Drawings

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the face gears of claims 5, 7, 8, 15, 17, and 18 must be shown or the feature(s) canceled from the claim(s). Mark's Standard Handbook for Mechanical Engineers (Eighth Edition) defines a face gear as having teeth cut on a rotating faceplate of a gear that mate with standard involute spur gears. No standard involute spur gears are shown in the drawings. No new matter may be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claims Rejected

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, and 10-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Scharbach '359. Scharbach shows bevel gears 4, 5, 6 meshing with bevel pinions 22, 23, 24, the pinions being disposed coaxially on a single shaft, and each pinion is selectively clutched to its corresponding bevel gear.

Claims 1, 2, 5, 10-12, 15 and 20 are rejected under 35 U.S.C. 102(a) as being anticipated by Olszewski '497. Olszewski shows a face gear drive with multiple spur gears, each of which are selectively clutched to a common coaxial shaft for engagement therewith.

Allowable Subject Matter

Claims 4, 6-9, 14, 16-19 and 21 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter:

The prior art does not anticipate nor render obvious the claimed invention as recited in the independent claims in combination with the subject matter of any of claims 4, 6-9, 14, 16-19 or 21.
